Quality, reliability and reply capability

In 1897, the paper engineer Mr. José Albet Quintana decided to start an industrial project, which 116 years after has improved and has been converted in a consistent reality.

Nowadays, FILTROS ANOIA, S.A has get a highlighted space inside the most renamed companies of the laboratory and industrial filtration sector.

All over other the world, day by day, thousand of engineers, analysts, scientific, teachers, students, operators, researchers and collaborators who recognized and trust in the quality of our products, homologated all of them based on the best quality standards.

But, it is not just the quality our products the reason why we are illusioned for. The response capacity and the technical focused attention in our customers and collaborators is one of the most important reasons of dedication.

Our repertories , one of the largest in the laboratory and industrial filtration sectors, takes the biggest part of our actual necessities: filtration, microfiltration, ultra filtration, equipment and accessories.

Finally, this new catalogue reaffirms our commitment with the quality, the attention to our customers and our own illusion.

FILTROS ANOIA in the world

Nowadays, Filtros Anoia, S.A. exports its products to more than 100 countries around the world, one of them are USA, Germany, Canada, UK, Finland, Switzerland, France, South Korea, Chile or Italy, for example.

Our filters are used in every single sector: pharmaceutical, cosmetically, drinks, foods, chemical, construction, metallurgical, environmental, university, stockbreeding, agriculture, mining, investigation, wine, textile, etc.

Quality control and technical definitions for filter paper

Weight in grams (grammage)

Unit of measurement: gr/m²

Expresses the weight in grams of a square meter of manufactured paper.

Standard applied: UNE-EN-ISO 536:1995.

According to which a sample of paper between 500 and 1000cm² is weighed on precision scales with a margin of error of 0.5%. Later, the area is calculated and the weight in grams is determined.

$$g = (m/A) \times 10.000$$

where: **m** is the mass of the sample in g
A is the area of the sample in cm²

Thickness

Unit of measurement: mm

Is the distance between both faces of the paper.

Standard applied: UNE-EN 20534 ISO 534:1988

To determine this parameter it used a micrometer that tests static load.

Apparent density

Unit of measurement: g/cm³

Expresses the apparent density according to the following calculation:

Standard applied: UNE-EN 20534 ISO 534:1988

$$\text{Apparent density (g/cm}^3\text{)} = \frac{\text{Weight in grams (g/m}^2\text{)} \times 1000}{\text{Thickness (mm)}}$$

Filtration

Is a denomination used as internal way according to the filtration speed of each quality. There are 7 different kind of filtration:

Extra-fast
Very fast
Fast
Medium
Slow
Very slow

Klemm method (capillary rise of the water)

Unit of measurement: mm/10 min.

Measures the height reached by distilled water at 20°C through a trip of paper 200mm long and 15mm wide, immersed 10mm, for a period of 10 minutes.

Standard applied: UNE 57044

Resistance to traction in wet state

Measuring unit: kN/m

Standard applied: UNE 57030-94, ISO 3781

Determines the resistance to the moist state in the filter paper measuring the resistance that a 180 mm length and 10mm width strip can support in a period of time of 10 minutes.

Tensile strength

Measuring unit: kN/m

Standard applied: UNE 57028

Is a paper strip of 15 mm width and 180mm length that is applied with strength that increases in an uniform and progressive way. The measure is taken at the same moment that the break. This parameter is measured in a longitudinal sense (SL) and also in a transversal sense (ST).

Quality control and technical definitions for filter paper

Permeability to the air

Measuring unit: l/min

Standard applied: Intern

It measures the airflow constant in l / min passing through an area of 100 cm² of filter paper at a pressure of 100 mm column of air (cda).

Resistance to the air

Measuring unit: Pa

Standard applied: BS-6410.84

The resistance to the air measured in Pa when passing through an area of 100 cm² of filter paper to a pressure of 10 m / min

Introduction to filtration

Efficiency of retention and speed filtration of FILTER-LAB® industrial filter papers.

The most important goal of the filtration is to adequately select the type of filter according to its purpose. To do this, we will try, by way of standard, to reach the quickest possible velocity of filtration for the level of retention that we need.

The filter papers are depth filters, that is, the retention of the particles take place not only on the surface of the filter but also in the interior by means of mechanisms that are, in some cases, rather complex. In the filtration process there are various factors that play a role and determine the retention, those factors are the following:

Retention on the surface

The particles whose size is more than the holes formed by the network of cellulose fibers will remain on the surface of the filter. Likewise, as the surface becomes saturated the ability of retention increases due to the formation of a layer of particles until the fill-up level is reached. It is here when the process of filtration stops.

Retention on the depth:

Refers to the mechanisms of retention produced inside the filter. Some of the most important processes are:

- **Electrostatic adsorption:** according to the polarity of the filter fibres and of the particles that must go through it, in some cases, attraction occurs which makes these particles adhere to the fibre walls and particles smaller than the size indicated in the specifications of the filter are retained.
- **Effects of inertia:** some particles will literally remain stuck inside the network of fibres due to the high kinetic energy with which they penetrate the pores of the frame.
- **Sedimentation:** the particles can be captured by the filter network and deposited by gravity in somewhere of the interior space formed by the fibres.

In any case, the efficiency of retention of a filter paper is also determined by the other factors related to the liquid, which can be: the pH value, the viscosity and concentrations of the liquid to be filtered as well as the form and composition of the particles in suspension in it.

Other causes or properties of the filter also affect the efficiency of retention: level of refinement of the cellulose fibres, resistance to the moist state of the filter, thickness, nature of the surface, etc.

So due to the extremely complex mechanisms on which filtration depends, it is sometimes impossible to theoretically determine the most adequate filter for filtration. It is at this moment when, in the case of difficult filtrations, it is essential to do some comparative testing of filtration between various samples of filter paper according to the parameters of retentions that we need.

In Filtros Anioia, S.A. are aware of the difficulty of some operations of filtration and because of this we are willing to help you resolve your problems of filtration for which we have our own laboratory for quality control and development of new products.

Technical filtering papers and cardboards

Filtration of chemical products, pharmaceutical, cosmetics, coloring, fatties, emulsions, juices, liquors, etc.

Description

Furthermore to the range of FILTER-LAB® laboratory filters, Filtros Anioia, S.A. manufactures and markets a wide range of filter papers for industrial use that are used in various sectors for the filtration of all types of liquids: chemical products, mineral and vegetable oils, coloring agents, fats, emulsions, juices wines, galvanic baths, essences, etc.

We make smooth and creased filtering papers and cardboards with quick, medium or slow velocities of filtration for specific applications or according to standard methods, starting from weights in grams from 44 to 600 gr./m² and all of these handled and die-cut at the dimensions requested by customers in customary or special formats.

Crepe surface

Properties

- Excellent charge capacity.
- A 15-20% more filtrating surface than a smooth paper.
- Higher resistance to the moist state.
- Avoid the premature silting.
- Limited grammage: from 45 to 240gr./m².

Smooth surface

Properties

- Good filter paper formation.
- More regular pores.
- Very homogeneous formation.
- Good charge capacity.
- Very wide range: from 45 to 600 gr./m².

Crepe technical filter papers

Ref.	Weight in grams gr/m ²	Thickness mm	Applications
1535 CT	50	0.185	Dye for textile fibers.
1591	64	0.165	Solutions with sugar with low concentration
F60	60	0.250	Filtration of infusions, emulsions and food
FA 70	70	0.270	Chemical products, essentials oils
1525 CR	73	0.285	Filtration of industrial colored, galvanic industry. Solutions a little bit acid or alkaline
1526M	87	0.370	Galvanic industry
1526	90	0.330	Galvanic industries, seed oils Solutions a little bit acid or alkaline
1526P	90	0.390	Filtration quicker than the earlier. Galvanic industry Recovery of precious metals, filtration of seed oils.
1518/110	110	0.320	Filtration of technical fats, moods, and sunflower oils.
1518/120	120	0.340	Industrial chemical products and fine chemistry.
1518/140W	132	0.550	Very dense edible oils, animal fats, concentrated essences.
1615	140	0.550	Technical greases, animal fats, juices and mosts
1518/140	140	0.450	Filtration of juices, grape-juices, wines, galvanic industry, etc.
1518/156	156	0.550	Syrups, essential oils, butters...
1518/160	160	0.450	Distiled and liquors.
1518/190	185	0.650	Polishment on virgin olive oils, glicerines and galvanic industry.
1518/190W	185	0.650	Chemical products
1518/240	240	0.780	Polishment on virgin olive oils, glicerines and galvanic industry. Absorpiont strips for capilation in parfums.

Technical filter paper ref. 1535

Surface: crepe

Grammage: 50 gr/m2
Thickness: 0.185 mm

Speed filtration: Fast

Aplications - Filtration of colorants in textile cones - Low concentration syrups	Properties - Crepe filter paper. - Thin thickness. - Biodegradable	Formats   
--	--	---

Technical filter paper ref. F 60

Surface: crepe

Grammage: 60 gr/m²
Thickness: 0.250 mm

Speed filtration: Very fast

Applications - Emulsions - Filtration of infusions - Filtration of different industrial ingredients - Musts - In galvanic industry filtration of lead, ferrum, gold, iridium, cooper, nickel and silver baths	Properties - Crepe filter paper. - Thin thickness. - Biodegradable	Formats   
---	--	--

Technical filter paper ref. 1591

Surface: crepe

Grammage: 64 gr/m²
Thickness: 0.165 mm

Speed filtration: Very fast

Applications - Solutions with sugar of low concentration - Filtration of juices	Properties - Crepe filter paper. - Thin thickness. - Biodegradable	Formats   
--	--	---

Technical filter paper ref. FA 70

Surface: crepe

Grammage: 70 gr/m²
Thickness: 0.270 mm

Speed filtration: Fast

Applications

- Filtration of chemical products
- Essential oils
- Simple clarification of liquids

Properties

- Crepe filter paper.
- Thin thickness
- Biodegradable

Formats

Technical filter paper ref. 1525

Surface: crepe

Grammage: 73 gr/m²
Thickness: 0.285 mm

Speed filtration: Fast

Applications

- Filtration of ceramic colorants
- Filtration of gold baths in galvanic industry.
- Soft acid and basic solutions
- Cooper baths in galvanic industry
- Filtration of edible oils

Properties

- Crepe filter paper.
- High wet resistance
- Biodegradable

Formats

Technical filter paper ref. 1526M

Surface: crepe

Grammage: 85 gr/m²
Thickness: 0.370 mm

Speed filtration: Fast

Applications

- Gold and cooper baths in galvanic industry

Properties

- Crepe filter paper.
- High wet resistance
- Biodegradable

Formats

Technical filter paper ref. 1526

Surface: crepe

Grammage: 90 gr/m²

Thickness: 0.330 mm

Speed filtration: Medium

Applications

- Gold and cooper baths in galvanic industry
- Filtration of sunflower oil
- Filtration of edible oils
- Musts
- In filtration of wines as protector of filter sheets
- Fruit juices

Properties

- Crepe filter paper.
- High wet resistance
- Biodegradable

Formats

Technical filter paper ref. 1526P

Surface: crepe

Grammage: 90 gr/m²

Thickness: 0.390 mm

Speed filtration: Very fast

Applications

- Filtration of dense edible oils
- In galvanic industry for filtration of cadmium, bright nickel, silver, zinc and nickel alloys.
- Filtration of dense fruit juices
- Sludge drying in filter press

Properties

- Crepe filter paper.
- High wet resistance
- Biodegradable

Formats

Technical filter paper ref. 1518/110

Surface: crepe

Grammage: 110 gr/m²

Thickness: 0.320 mm

Speed filtration: Medium

Applications

- Filtration of sunflower oils
- Technical fats
- Sludge drying in filter press

Properties

- Crepe filter paper.
- Thin thickness
- Biodegradable

Formats

Technical filter paper ref. 1518/120

Surface: crepe

Grammage: 120 gr/m²
Thickness: 0.340 mm

Speed filtration: Fast

Applications

- Fine chemical products

Properties

- Crepe filter paper.
- High wet resistance
- Biodegradable

Formats

Technical filter paper ref. 1518/140W

Surface: crepe

Grammage: 132 gr/m²
Thickness: 0.550 mm

Speed filtration: Very fast

Applications

- Filtration of lacquers
- Dye emulsions
- Animal fats
- Filtration of gelatines

Properties

- Crepe filter paper.
- High wet resistance
- Biodegradable

Formats

Technical filter paper ref. 1615

Surface: crepe

Grammage: 140 gr/m²
Thickness: 0.550 mm

Speed filtration: Very fast

Applications

- Filtration of juices and grape juices.
- Filtration of wines
- Animal fats
- Technical greases

Properties

- Crepe filter paper.
- High wet resistance
- Biodegradable

Formats

Technical filter paper ref. 1518/140

Surface: crepe

Grammage: 140 gr/m²

Thickness: 0.450 mm

Speed filtration: Fast

Applications

- Filtration of juices and grape juices.
- Pre-filtration of wines
- In galvanic industry for cooper, nickel and zinc baths
- Technical greases

Properties

- Crepe filter paper.
- High wet resistance
- Biodegradable

Formats

Technical filter paper ref. 1518/156

Surface: crepe

Grammage: 156 gr/m²

Thickness: 0.550 mm

Speed filtration: Extra fast

Applications

- Filtration of syrups
- Essential oils
- Butters and margarines

Properties

- Crepe filter paper.
- High wet resistance
- Biodegradable

Formats

Technical filter paper ref. 1518/160

Surface: crepe

Grammage: 160 gr/m²

Thickness: 0.450 mm

Speed filtration: Medium

Applications

- Filtration of hair lotions
- Distilled and liquors
- Filtration of musts and red wines
- Fruit juices

Properties

- Crepe filter paper.
- High wet resistance
- Biodegradable

Formats

Technical filter paper ref. 1518/190

Surface: crepe

Grammage: 185 gr/m²
Thickness: 0.650 mm

Speed filtration: Medium

Applications

- Polishment of olive oil before bottled in glass
- Filtration of glycerines in high temperature
- In galvanic industry for cooper, nickel and zinc baths.
- Contaminated industrial liquids
- Filtration of dye stuff
- Chip pan filters

Properties

- Crepe filter paper.
- High wet resistance
- Biodegradable

Formats

Technical filter paper ref. 1518/190WS

Surface: crepe

Grammage: 185 gr/m²
Thickness: 0.650 mm

Speed filtration: Very fast

Applications

- Filtration of chemical products in high pressure by filter press

Properties

- Crepe filter paper.
- Extra high wet resistance
- Biodegradable

Formats

Technical filter paper ref. 1518/240

Surface: crepe

Grammage: 240 gr/m²
Thickness: 0.780 mm

Speed filtration: Fast

Applications

- Polishment of olive oil before bottled in glass
- Absorbent strips for capillarization in parfums
- Filtration of lacquers

Properties

- Crepe filter paper.
- Biodegradable
- Excellent load capacity
- High wet resistance

Formats

Smooth technical papers

Ref.	Weight in grams gr/m ²	Thickness mm	Applications
1300G	85	0.180	Prefiltration before filter disks
SM90	90	0.190	Retention of carbon active particles, mineral waters and very fine particles.
1055	100	0.240	Essences filtration, galvanizing industry. Protection of disks in filter presses for wines, liquors, vinegars, etc.
1300/110	110	0.250	Quick filtration of large volumes for the retention of thick particles. Filtration of emulsins and ink.
1301/125	125	0.250	Chemical products
1301/140	140	0.290	Resines, lacquers and additives
F150	150	0.300	water from boilers and clear liquids
1301/160	160	0.380	Filtration of turbid liquids, extracts and juices.
1320	160	0.470	Filtration of very dense liquids, essential oils, animal fats, syrups.
1301/190	185	0.410	Filtration of chemical products and edible oils. Absorbents in the graphic industry.
1301/190S	185	0.400	High resistance to moist state. Filtration in press filters with high pressure
1301/250	250	0.580	Clarification of liquids, oils and cosmetics.
1301/280	280	0.444	Filtration of mineral oils, hydrocarbons, lacquers...
1301/300	300	0.650	Mineral oils (big motors, machines, electrical transformers)
1301/320	320	0.880	Turbines oils, transformers, hydraulics, motor lubricants
1301/350	350	0.780	Medium filtration. Resistant to the moist state.
1516P	375	0.980	Galvanic industry, very dense and dirty mineral oils.
1516	390	0.930	Galvanic industry, oils, turbid mineral oils. Absorbent for liquids
1301/400	400	0.750	Filtration of nutritional additives.
1301/430	430	0.880	Mineral water, fine chemicals, galvanic, special low density liquids
1301/450	450	0.990	Filtration or clarifications in the chemical industry. Alcohols, filtration of water from boilers.
1301/500	500	1.130	Polishing of edible oils, soaking of industrial substances.
1345	160	0.400 - 0.450	Carbon active paper. Liquids bleaching, galvanic industry Chemical products
1346	170	0.450 - 0.500	Active carbon filter paper, food grade

Technical filter paper ref. 1300G

Surface: smooth

Grammage: 85 gr/m²
Thickness: 0.180 mm

Speed filtration: Medium

Applications

- Prefiltration in filter press before filter sheets
- Filtration of salted solutions
- Filtration of sugar juices

Properties

- Smooth filter paper.
- High wet resistance
- Biodegradable

Formats

Technical filter paper ref. SM90

Surface: smooth

Grammage: 90 gr/m²
Thickness: 0.190 mm

Speed filtration: Very slow

Applications

- Retention of carbon active particles
- Filtration of mineral water
- Final polishment of different liquids

Properties

- Smooth filter paper.
- Extra high wet resistance
- Biodegradable
- Very slow filtration

Formats

Technical filter paper ref. 1055

Surface: smooth

Grammage: 100 gr/m²
Thickness: 0.240 mm

Speed filtration: Medium

Applications

- Filtration of essences
- Prefiltration of wine, liquors and vinegars before filter sheets.

Properties

- Smooth filter paper.
- High wet resistance
- Biodegradable

Formats

Technical filter paper ref. 1300/110

Surface: smooth

Grammage: 110 gr/m²
Thickness: 0.250 mm

Speed filtration: Medium

Applications	Properties	Formats
- Quick filtration of large volume fro retention of thick particles - Filtration of emulsions - Absorption of ink in the print industry	- Smooth filter paper. - High wet resistance - Biodegradable	  

Technical filter paper ref. 1301/125

Surface: smooth

Grammage: 125 gr/m²
Thickness: 0.250 mm

Speed filtration: Fast

Applications	Properties	Formats
Filtration of chemical products	- Crepe filter paper. - High wet resistance - Biodegradable	  

Technical filter paper ref. 1301/140

Surface: smooth

Grammage: 140 gr/m²
Thickness: 0.290 mm

Speed filtration: Fast

Applications	Properties	Formats
- Filtration of resines in high temperature - Filtration of food additives - Filtration of lacquers	- Crepe filter paper. - High wet resistance - Biodegradable	  

Technical filter paper ref. F150

Surface: smooth

Grammage: 150 gr/m²
Thickness: 0.300 mm

Speed filtration: Very Slow

Applications

- Filtration of water for boilers
- Clarification of clear liquids
- Polishing of chemical products

Properties

- Smooth filter paper.
- High wet resistance
- Biodegradable
- Very slow filtration

Formats

Technical filter paper ref. 1301/160

Surface: smooth

Grammage: 160 gr/m²
Thickness: 0.380 mm

Speed filtration: Medium

Applications

- Filtration of turbid liquids
- Filtration of vegetable extracts
- Fruit juices

Properties

- Smooth filter paper.
- High wet resistance
- Biodegradable

Formats

Technical filter paper ref. 1320

Surface: smooth

Grammage: 160 gr/m²
Thickness: 0.470 mm

Speed filtration: Extra fast

Applications

- Filtration of animal fats as butter.
- Very dense essential oils.
- Syrups
- Filtration of liquids with high load precipitates

Properties

- Smooth filter paper.
- High wet resistance
- Biodegradable
- Extra fast filtration

Formats

Grammage: 190 gr/m2
Thickness: 0.410 mm

Extra fast very fast fast **Medium** Slow Very slow

- Polishment of olive oil before bottled.
- Filtration of chemicals products
- Absorption of excess ink in the print industry
- In the galvanic industry for filtration of manganese baths
- Filtration of food additives

- Smooth filter paper.
- High wet resistance
- Biodegradable

Grammage: 190 gr/m²
Thickness: 0.400 mm

A horizontal bar with a light blue background and a thin black border. Below the bar, the labels 'Extra fast', 'very fast', 'fast', 'Medium', 'Slow', and 'Very slow' are written in black text. A yellow arrow points downwards from the top of the bar to the 'fast' label.

- Filtration in filter press with high pressure

- Smooth filter paper.
- Very high wet resistance
- Biodegradable

Grammage: 250 gr/m2
Thickness: 0.580 mm

Extra fast very fast fast Medium Slow Very slow

- Standard quality for clarification of liquids
- Filtration of transformer oils
- Cosmetics
- In galvanic industry for filtration of manganese, copper, bright nickel, zinc and nickel baths.

- Smooth filter paper.
- High wet resistance
- Biodegradable

Technical filter paper ref. 1301/280

Surface: smooth

Grammage: 280 gr/m²
Thickness: 0.444 mm

Speed filtration: Medium

Applications

- Filtration of mineral oils
- Hydrocarbons
- Lacquers and resins
- In galvanic industry for filtration of cooper and zinc baths

Properties

- Smooth filter paper.
- High wet resistance
- Biodegradable

Formats

Technical filter paper ref. 1301/300

Surface: smooth

Grammage: 300 gr/m²
Thickness: 0.650 mm

Speed filtration: Medium

Applications

- Special quality for filtration of mineral oils: big motors, machines, electrical transformers.

Properties

- Smooth filter paper.
- Very high wet resistance
- Biodegradable

Formats

Technical filter paper ref. 1301/320

Surface: smooth

Grammage: 320 gr/m²
Thickness: 0.880 mm

Speed filtration: Medium

Applications

- Filtration of turbine oils, transformers, hydraulics, motor lubricants.
- Dirty products

Properties

- Smooth filter paper.
- High wet resistance
- Biodegradable

Formats

Technical filter paper ref. 1301/350

Surface: smooth
Grammage: 350 gr/m²
Thickness: 0.780 mm

Speed filtration: Medium

Applications	Properties	Formats
Filtration of fine chemicals	- Smooth filter paper. - Very high wet resistance - Biodegradable - Good retention of fine particles	

Technical filter paper ref. 1516P

Surface: smooth
Grammage: 375 gr/m²
Thickness: 0.980 mm

Speed filtration: Fast

Applications	Properties	Formats
- Filtration of very dense and dirty oils - In galvanic industry for silver and zinc baths - Dense resins and lacquers - Essential oils, syrups and fats - Clarification of biodiesel	- Smooth filter paper. - Very high wet resistance - Biodegradable - High load capacity	

Technical filter paper ref. 1516

Surface: smooth
Grammage: 390 gr/m²
Thickness: 0.930 mm

Speed filtration: Medium

Applications	Properties	Formats
- Absorption of different liquids. - Filtration of mineral, engines, electrical transformer oils, motors, turbines	- Smooth filter paper. - High wet resistance - Biodegradable - High load capacity	

Technical filter paper ref. 1301/400

Surface: smooth

Grammage: 400 gr/m²
Thickness: 0.750 mm

Speed filtration: Medium

Applications

- Filtration of fine chemicals
- Filtration of nutritional additives
- Mineral water
- Filtration of clear liquids with low density
- In galvanic industry for filtration of cooper baths

Properties

- Smooth filter paper.
- Very high wet resistance
- Biodegradable
- Good retention of fine particles
- High load capacity

Formats

Technical filter paper ref. 1301/430C

Surface: smooth

Grammage: 430 gr/m²
Thickness: 0.880 mm

Speed filtration: Very Slow

Applications

- Filtration of fine chemicals
- Mineral water
- Filtration of clear liquids with low density
- In galvanic industry for filtration of cooper baths
- Liquids with very high turbidity

Properties

- Smooth filter paper.
- Very high wet resistance
- Biodegradable
- Good retention of fine particles
- High load capacity

Formats

Technical filter paper ref. 1301/450

Surface: smooth

Grammage: 450 gr/m²
Thickness: 0.990 mm

Speed filtration: Slow

Applications

- Filtration and clarifications in the chemical industry
- Alcohols and spirits
- Filtration of water for boilers
- Retention of particles as diatomeaceous, active carbon, perlites and other used in the food industry

Properties

- Smooth filter paper.
- Very high wet resistance
- Biodegradable
- High load capacity
- Good retention of fine particles
- Thick thickness

Formats

Technical filter paper ref. 1301/500

Surface: smooth

Grammage: 500 gr/m²
Thickness: 1.130 mm

Speed filtration: Slow

Aplications

- Construction of sewn bags for final filtration of olive oil.
- Filtration of many industrial substances
- Mineral water
- Retention of particles as active carbon, perlites, diatomeaceus used in the food industry
- Filtration of foods
- In galvanic industry for silver and nickelsulfamate baths

Properties

- Smooth filter paper.
- High wet resistance
- Biodegradable
- High load capacity
- Thick filter paper

Formats

Carbon filter paper ref. 1345

Surface: smooth

Grammage: 160 gr/m²
Thickness: 0.400 – 0.450 mm

Speed filtration: Slow

Applications

- Chemical products
- Clarification and decoloration of industrial liquids.
- In galvanic industry for filtration of lead, cadmium, ferrum, cooper and bright nickel baths
- Regeneration of galvanic baths

Properties

- Filter paper with active carbon
- 30% carbon contained
- Good retention of very fine particles
- Use only for industrial grade

Formats

Carbon filter paper ref. 1346

Surface: smooth

Grammage: 170 gr/m²
Thickness: 0.450 – 0.500 mm

Speed filtration: Slow

Applications

- Filtration and decoloration of food

Properties

- Filter paper with active carbon
- 30% carbon contained
- Good retention of very fine particles
- Use only for food grade

Formats

Filter sheets

Filtration of chemical products, pharmaceuticals, cosmetics, additives, fat, emulsions, fruit juices, liquors, oils, drinks...

Description

The filtration of liquids through the use of filter presses and filter disks is nowadays a system that is still much in use for: industrial liquids, food, drinks, cosmetics. Filter sheets are made of pure cellulose and cotton fibers, Diatom soil, pearls and polyethylene fibers in some cases. This composition provides to this filtration method some interesting characteristics:

Excellent performance

The cellulose structure creates a three dimensional matrix due to the large void volume greater than 85%, allowing passage of high flow.

Retention

Auxiliary materials of the plates increase the retentive effect which, combined with the high positive zeta potential provide polyethylene fibers are retained, also causes small particles and negatively charged colloids.

Quality

The Filtros Anioia, S.A filter disks are manufactured according to the quality system DIN ISO 9001. All specific production parameters are monitored continuously during the whole manufacturing process.

Resistance

Thanks to the using inert polymers during the production process ensures that these plates are resistant to humid environments, even at concrete temperature.

APPLICATIONS

- Drinks: wine, grape juice, liquor, beer, cider, vinegar, mineral water, fruit juices, spirits, etc.
- Chemicals: resins, lacquers, stains, dyes, alcohols.
- Edible oils: olive, refined, seed, etc.
- Foodstuffs essences, syrups, additives, gelatine, fructose, glucose, vegetable extracts, etc.
- Pharmaceuticals: serum and plasma solutions, ophthalmic solutions, vaccines, etc.
- Cosmetics and perfumes: fragrances, scents, colognes.
- Hydrocarbons: gasoline, lubricants, mineral oils.

Filter press

Filtration of different industrial and pharmaceuticals liquids, beverages, food, etc.

APPLICATION

- Filtration of wines, liqueurs, spirits, vinegar.
- Chemical filtration.
- Filtration of essential oils.
- Filtration of edible oils.
- Filtration of samples of high-volume laboratory.
- Small-scale production of perfumes

Description

Sometimes leakages must perform certain small volumes of liquids whose production is performed on a reduced scale (perfumes, pharmaceuticals, valuable liquids, etc.). In these cases require the use of filtration systems which are manageable, accurate and reliable.

FILTER-LAB® is a filtration system filter press for small size and portable. Use filter plates 20 x 20 cm, with a maximum of 36 plates. The version is made of bronze M3000, M3000 and another quality the INOX, for food use is also made in bronze with the surface treatment steel.

It is available as an accessory gauge and spare parts: rubber washers, drip tray and filter holder plates.

Technical specifications

M3000 series equipment Material: brass body, PP plates, rubber washers
Material M3000INOX team series: brass body with a surface treatment steel, PP plates, rubber washers.
Measure plates: 20 x 20 cm
Maximum operating pressure: 20 bar
Power supply: 220 V, 50 Hz
Work Surface: 6 plates, 0.24 m², 12 plates, 0.48 m², 18 plates, 0.72 m², 36 plates, 1.44 m²
Weight: 17 kg (6 plates)
Dimensions: 450 x 270 x 280 mm
Input / Output: rubber tube 20 mm diameter

About this catalog

All the applications indicated in this catalog of products are only possible examples of use after many years of experience. So it is advised to evaluate in each case the characteristics of the sample or the liquid to filter and also the use conditions.

There is a version of this catalog in Spanish, you can ask for it to our Commercial Department.

Any partial or total reproduction of this content: images, text, graphics or mark, is completely forbidden without the express authorization and in writing of FILTROS ANOIA, S.A.

Technical specifications, formats and presentations are held to changes without previous notice.

Digital edition finished May, 2014. Barcelona
